

# Leaded vs No-Lead Packaging

Here are the differences in the packaging between Leaded & No-Lead products.

For the No-Lead products we have added a “7” to the model number, example: 201-3JM 311x001 = 7201-3JM 311x001. Also, as you can see below, there is a gold NO LEAD label wrapped around two corners of the products packaging, to indicate it is no-lead.

Both packages display a warning about No-Lead legislation on the bottom of the labels.
